MPS DEFENDER LITE 6000

PROACTIVE SITE PROTECTION

The DEFENDER LITE 6000 is similar to the Defender 6000 except it does not include in internal VMS and includes local point to point radio system instead of cellular. This configuration is to be used on a site with either a trailer or a VMS base station product to provide recording. The system is an effective, proactive detection and deterrent tool. The MPS Defense System functionality offers the ability to arm and disarm a system or a site. This includes local arm status notification lights to let you know the status of the system. This system can detect activity in the protected area, turn on super bright LED lighting, flash the strobe lights, and control the warble siren. The system then will produce notifications via emails, SMS, and the MPS Defense System cell phone application. When a monitoring service is used, the activity can be investigated with snap shots, live and historical video; then prompt predetermined action can be taken.

FEATURES

- 2 3600 lumen flood lights provide light around the area for both deterrent and providing better light in dark areas.
- 8 megapixel panoramic camera, a viewing range of 180˚ provides a great view.
- PIR detector to reach out 40+ feet to detect motion in the area. (optional 80')
- Embedded warble siren allows an audible indication that motion has been detected.
- Scheduled operation allows you to activate your system during specific hours
- Police grade programmable strobes act as a deterrent.
- Easy Deployment - mounts on wall or pole
- This is a system is configured for constant power operation
- Point to Point communications
- Receive emails/SMS alerts
- Remote Video Access
- Control your system remotely--turn on lights and reset the system.
- MP Status provides the ability to see all of the critical information about your device, remotely control activities, and be notified of any abnormalities.
